NOTES ON COMPANIES

Tip: Know your formats and formulas. Be aware not to use a variety of unnecessarily complicated and time-consuming calculations, you are working against time.

Write neatly and legibly, markers don't want to struggle to read your handwriting.

NOTES ON COMPANY FINANCIAL STATEMENTS AND AUDIT REPORT

Preparing financial statements will always form a major part of an Accounting paper. The Income Statement and/or Balance Sheet and Cash Flow Statement appear in all examination papers. Make sure you **know the formats**. The basic format and preparation of financial statements are introduced in Gr. 10 and reinforced in Gr. 11 and 12. The Gr. 12 learner is expected to have a **solid foundation**, which must include **concepts, formats**, elements of the **accounting equation**, the **double entry principle** and the **steps in the accounting cycle**. Although each financial statement is dealt with separately, you need to know that it is all in the context of the **Annual Report**, presented at the **general meeting of shareholders**, so please appreciate the usefulness and relevance of financial statements and the difference between financial performance (Income Statement) and financial position (Balance Sheet). Financial statements are always accompanied by **notes**. Know the composition/components of the different notes and their place in financial statements.

Make sure you understand the **calculations for depreciation** and the **carrying value of assets sold**.

Please take note that calculations in a question can be used in subsequent questions, even if it is calculated incorrectly, if you transfer the wrong figure to the right place, you earn **method marks**.

When **calculating the correct net profit**, indicate the adjustments with the correct sign (+ or -). (Show this in all your workings).

The **amount owing to SARS**. You have an amount owed to SARS (from the Income Statement) and an amount for provisional tax payments (you have already paid it during the year, to make the big payment at the end of the year easier). These 2 figures should be **deducted** from each other to find the amount owing to or from SARS.

Retained Income Note: When buying back shares, use the amount **in excess of the average share price** and use the **correct number of shares** that is entitled to receive final dividends.

Balance Sheet: Know your **format**, don't be ignorant about the basic format by misplacing items, you lose valuable marks in the process.

Trade and Other Receivables: If a debtor is transferred from debtors to creditors, show your workings. If the debtor has a credit balance the Debtors will increase, if the debtor has a debit balance Debtors will decrease.

Trade and Other Payables: Study the note.

The value of **current assets/current liabilities** must sometimes be determined by using the current ratio.

Calculating the short-term portion of the loan. Take care with this calculation. This amount can also be the balancing figure under Current Liabilities. This amount should be the same as the amount deducted from loan under Non-current Liabilities

Adjustments: make sure adjustment has a **double effect**.

A style adopted in financial statements is that you must be **able to work from any point**, in the financial statements, using financial indicators and balancing figures to complete the statements. Don't let balancing figures be a stumbling block, it must motivate you to proceed with the question, method marks on incorrect figures can add up to more than 50% of the marks of a Statement.

Audit Report: i.e. unqualified, qualified and disclaimers. You should appreciate the considerable training and skill required of auditors, as well as the responsibilities that they are expected to discharge.

Examples of audit evidence: Auditors use this to check the accuracy and authenticity.

It is possible for **directors to prevent a bad audit report**.

NOTES ON CASH FLOW STATEMENT:

1. Dividends & Tax paid

The following table can be used to calculate dividends and tax paid

| | |
|---|--|
| | |
| Amount in the financial statements | |
| + Amount owing at the beginning of the year | |
| - Amount owing at the end of the year | |
| = Amount paid | |

2. Income Tax paid

- Many learners insert the **incorrect + / - sign** in front of the amounts especially when using the above table this is due to the fact that Income tax can appear either as current assets or a current liability
- It is also evident that many learners do not know the difference between **Income tax** and **Income tax paid**.

SUGGESTIONS:

- Learners need to have a clear understanding as to why Income tax can appear either as **a current asset** or **a current liability** in the Balance Sheet. They need to remember that if tax appears in the **current assets section then it was overpaid to SARS** and if it appears in the current Liability section then **it is owing to SARS**. The most effective way of explaining this concept to learners is by recreating a **SARS – Income tax ledger Account**. The bank amount on the **debit side** of the account is the **amount paid to SARS** in that financial year.

3. Proceeds from disposal of Asset/Additions at cost/Depreciation

- The above calculation recurs in practically all examinations and most candidates are unable to get the correct answers because they insert the **incorrect + / - sign** in front of the **amounts**.

SUGGESTIONS:

To eradicate the confusion in this regard it will be preferable to use the **Fixed Asset Note 3** (which all learners are familiar with) to obtain the answer. The answer to this question can be obtained as follows:

NOTE 3 /FORMULA

| | Fixed Assets |
|---|--------------|
| Cost | |
| Accumulated Depreciation | |
| Carrying Value beginning of the year | R XXXXX |
| + Additions | + XXXXX |
| - Disposal at carrying value | - ???? |
| - Depreciation | - XXXXX |
| = Carrying value at the end of the year | =R XXXXXXX |
| Cost | |
| Accumulated Depreciation | |

4. Cash and Cash Equivalents

- Most candidates do not understand the concept of **Net effect** the most of the time totally disregard the effect of the bank overdraft.

SUGGESTIONS:

- Learners need to understand that the net effect implies- by how much did the bank **balance increase or decrease by**, from the beginning of the year till the end of the year. The following formula can assist:

Formula: Net Effect (NE) = Current balance (C) - Previous balance (P)

5. Cash effects of financing Activities (12)

- Candidates are unsure when to bracket an amount and when to leave an amount in its positive form, since they have not yet mastered the concept of inflows and outflows
- Many candidates are unsure which amount to record for new shares issued during the year.
- Many candidates are unsure when to record an amount of loan as an inflow or an outflow.

SUGGESTIONS:

- Educators need to emphasise that the Cash Flow statement deals with the flow of money in and out of the business through the bank account of the business. Whenever the **bank balance decreases** due to payments made then the final amount on the face of the cash flow statement must be **bracketed** and whenever the **bank balance increases** due to proceeds received then it must **not be bracketed**.
- The concept of the **increase/decrease in loans and fixed deposits** must be clearly explained to learners. The following notes can be useful to educators

| Concept | Inflow/outflow | Brackets/ No brackets | Reason |
|---|----------------|-----------------------|---|
| Increase in loans (have more money) | Inflow | No brackets | This borrowed money will increase your bank balance, so it has a positive effect |
| Decrease in loans (have less money) | Outflow | Brackets | Money has to be paid from the business bank account so the bank balance will decrease |
| Increase in Investments (have less money) | Outflow | Brackets | The bank account balance will decrease since money is withdrawn from the current account and invested in another financial institution |
| Decrease in Investments (have more money) | Inflow | No brackets | The investment has matured /expired so the money will be received by the business. This will increase the bank balance |

* **HINT** - Remind learners to focus their attention on the bank balance

- The most effective way of obtaining the **amount for the issue of new shares** is to prepare the ledger account for ordinary share capital.
- The total amount **utilised for the purchases of the shares** must be reflected in **Cash Flow statement under financing activities**.

NOTES ON INVENTORY SYSTEMS:

Always take advantage of the **easily obtainable marks for routine calculations and comments**, often appearing regularly in past examination papers. **Don't break your head and waste time** with questions you do not understand. If there is time, you can re-visit those questions again.

Please don't use unnecessarily lengthy processes by **calculating cost of sales** and then using this figure to arrive at the stock valuations.

| Three valuation methods | FIFO method | Specific identification method | Average Weighted method |
|---|--|---|--|
| Relevance to different types of products | Products with a short shelf life e.g. vegetables. | Very expensive products such as Mercedes, Porche, Bentleys. | e.g. groceries store. |
| Remember to: | Remember to deduct returns normally from the latest purchases. Count from the latest purchase backwards. | Items should be counted individually. | Get the average price and x by number of units left. |
| Standard calculation of value of closing stock | | 5 Mercedes @ Rx = 2 Porches @ Rx = 1 Bently @Rx =..... Value of stock = R..... | |

Calculation for the **% mark-up achieved**: You must calculate the **gross profit**, do not simply divided the sales amount by the cost of sales (but you will earn part-marks for doing this).

Ethics = doing things the right way, no underhanded, unethical transaction, bribery or corruption.

Recap and revise the stock systems (**perpetual and periodic**) covered in Gr. 11 to get prior knowledge.

Predictable calculations under all stock valuation methods:

Determine the value of closing stock, cost of sales, gross profit and missing items.

Financial indicators relating to stock:

Stockholding period: = How long will your stock last before ordering again. Sometimes it is specifically required to use the closing stock figure of that year only, then don't waste time by determining the average stock)

| Stock holding period = | | |
|------------------------|---|---------------|
| Opening stock + |  | Closing stock |
| Cost of sales | | |

| Stock roll over period = | | |
|--------------------------|---|---------------|
| Opening stock + |  | Closing stock |
| Cost of sales | | |

Number of missing items: Opening stock + Purchases – Returns – Items sold = what is supposed to be left over, compare it with what is left over.

The topic of stock lends itself to deep **problem-solving** scenarios, of business ethics and mismanagement of stock. Critically discuss effective management and internal control or the lack thereof. Analyse the information presented, usually in tables, to justify and support the arguments they present. This will normally involve comparisons between different products or between time periods. You can score part-marks for quoting relevant figures.

NOTES ON MANUFACTURING

Because this question is fairly predictable, examiners will sometimes strive to introduce more creativity, (different questioning techniques) meaning you should use your common logic to reason questions you haven't seen before.

Direct
+ Direct
= Prime
+ Factory
= Cost
+ Work
- Work
= Cost

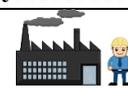

Factory Overhead Cost Note Remember: You must separate the portion of costs applicable to the **factory** by applying the ratios or percentages to exclude **costs of the administration and sales** divisions.

Please don't include the **advertising** expense in the **Factory overheads**, you are penalised and lose marks for foreign items. **Advertising = Sales and distribution cost.**

Calculating the **total cost of production** basically replicates the composition of the **Work-In-Progress Stock Account**, which is **Grade 11 content** = figure when completing the Production Cost Statements. When you use the approaches of using the **number of units produced**, multiply it by the unit cost or complete the Finished Goods Stock Account to calculate this figure.

Calculating the additional profit = contribution per unit (i.e. selling price less variable cost per unit), is aligned to the concept of the break-even point. Remember, fixed costs stay the same up to break-even point, then multiply the selling price with the extra units and deduct the variable cost per unit.

Calculating and commenting on the break-even point: comment on both the **break-even point and the level of production**; both factors. **All production above BEP + profit.**

Examiners use **skills** such as: **fractions, ratios** and/or **percentages** to calculate costs per component or department. **Year-end adjustments and reversals** may also feature in these calculations (Draw up T-accounts on the side of your Answer book). **Problem-solving questions** are common in Manufacturing, whereby information on different products is provided and learners are expected to identify problems and to offer solutions based on the figures or calculations from the table of information provided.

NOTES ON RECONCILIATIONS & VAT

Bank and Creditors-: Learners should study the following:

- **Purpose** of the Bank Reconciliation and Creditors Reconciliation.
- Know when the **Bank Account** has favourable (Debit) or Unfavourable (Credit) **balance**.
- Know when **Bank Statement balance** is favourable (Credit) and Unfavourable (Debit).
- Be able to complete Bank Reconciliation Statement using two column Format or single column Format.
- Learners also have to remember that the supplier is the creditor in the books of the business and the business is a debtor in the books of the supplier.
- Learners need to complete the Creditors Reconciliation Statement so that it reconciles the balance from the Creditor's Statement of Account with the Creditors Ledger Account.

Learners should be able to:

- Cancel the **stale cheque** in the **CRJ**
- Correct the error, Overcast or Under cast
- Record the EFT transactions
- Calculate the bank account balance
- Internal control of cash

Debtors Age Analysis: Learners should take note of the following:

- Credit Term = the period in which the debt should be paid back e.g. 50% within 30 days, 30% within 60 days and the rest before 90 days expired.
- Credit Limit = A debtor may not buy above a certain level (this is based on affordability/ the ability to pay back the debt).

VAT: Learners should be able to complete the following:

- Calculate VAT amount payable/receivable to/from SARS by completing VAT Control Account or from calculations using VAT Input and VAT Output figures
- Distinguish between VAT avoidance and VAT evasion
- Know VAT Exempted and Zero-rated items

| VAT exempted items: | Zero-rated VAT items |

In addition, if a retailer realises the mistake, the VAT incorrectly paid to SARS cannot be claimed back unless the retailer can provide proof to SARS that the VAT refund will be paid back to the customer who originally paid the VAT.</p> | <p>However, the zero rating is not available where the goods are provided as a meal, ready for consumption when supplied. NOTES ON BUDGETING (use terms: **overspent, underspent, under-budgeted, over-budgeted**)

This is normally the **last question** in a paper and many candidates **struggle to complete**, and some do not attempt the question at all, due to an inability to comply with the **time frames**. Gr. 11 CAPS prescribes the preparation and presentation of a Cash Budget and the Projected Income Statement, while Gr. 12 CAPS requires **analysis and interpretation of the actual figures against budgeted/projected figures**. When you analyse, (assessment of variances) use the **appropriate terms** such as **overspent, underspent, under-budgeted and over-budgeted**

AND

assess the **impact** of the item on **business operations** and on **related items of income or expenses**.

Many a time you are required to identify **missing figures** in either a Cash Budget and/or a Projected Income Statement (Gr. 11 Acc. CAPS), or a **combination of both statements** in the same question, it is to assess candidates' knowledge of the differences between the Cash Budget and the Projected Income Statement, still it is not complicated calculations, you **evaluate** (= **compare**) the projected and actual figures in a Projected Income Statement, use the terms mentioned above and quote relevant figures to support your explanations. (Examiners love to ask this in problem-solving scenarios).

Make sure you **place figures** in the **appropriate statement** and **correct months**, **THINK LOGICALLY**.

| | <u>Cash Budget</u> | <u>Projected Income Statement</u> |
|---------------------|---|--|
| Purpose | A managerial accounting document to determine the projected cash expected to be received and paid for a period in the future. | A managerial accounting document to determine the projected income and expenses and gross and net profit for a period in the future. |
| Similarities | Cash sales and cash from debtors Payments to creditors Only cash income and expenses | Cash sales and all credit sales Cost of sales All cash + non-cash incomes + expenses |
| Differences | <u>Do not include:</u> Depreciation Bad debts = non-cash items Discount allowed/received Profit/loss on sale of asset | <u>Include:</u> Depreciation Bad debts Discount allowed/received Profit/loss on sale of asset |

Be aware that a **penalty** is given **for superfluous entries** (deduct marks for the same figure used all over because you are not sure)

How to calculate the e.g. **% increase** in wages/salaries or anything for that matter, (a basic Gr. 9 calculation), = the **difference** between last year's and this year's salaries over **what it was x 100**. It must be equal or more than the current **inflation rate**, now 3,6% in 2020 for workers to be happy.

Think logically, can customers install wall to wall carpets? No. So look at **related items** such as carpet sales and installation. If carpet sales go up, so must the expense of installing them go up. Compare this two aspects month after month, if there is a difference, write it down = variance.

A **new competitor** is a common question. If a new person enters the market, your customers will buy from the new supplier (your competitor) you need to do something to retain your customers to still buy from you. Search through the expenses for increased expenses to see what the supplier did in order to retain his customers e.g. advertised discounts/lowered gross profit margin etc.

The **amount payable to creditors** is a common question. You almost always get a % discount for paying within 30 days (seen as paying cash). You need to calculate the projected cost of sales and deduct the % discount.
